

"Security Through Corroboration"

Physical security involves the use of multiple layers of interdependent systems that can include CCTV surveillance, security guards, protective barriers, locks, access control, perimeter intrusion detection, deterrent systems, fire protection, and other systems designed to protect persons and property.

Shelby Forensic looks at physical protection systems as follows:

Deterrence: Crime Prevention through Environment Design. This protection uses the environment to help protect the area i.e. only one access point, heightened awareness about how people use their space for legitimate and criminal intentions.

Detection: Alarms
Camera surveillance
Drones
Lighting
Communications and power
Off-site monitoring

Delay: Barriers
Guarding

Response: Armed response

Data Analytics: Use the data that the above systems always provide to improve your physical security.

Shelby Enterprises, by using the above methods, can provide you with an in-depth protection system that matches your risks. The perpetrator would be required to avoid and defeat several protection devices in a sequence.

Shelby Enterprises has access to industry knowledge and experts to ensure that your physical systems are what you need for your protection.
